A "bulk plant" is defined as any facility where the primary function is to store LP-Gas prior to the further distribution, where LP-Gas is received by cargo tank motor vehicle, railroad tank car, or pipeline, and then distributed by portable container (package) delivery, by cargo tank motor vehicle, or through gas piping. A facility distributing gas through gas piping, such as a community gas system, is exempt from the definition of a bulk plant unless the facility is used to transfer product into cargo tank motor vehicles for further distribution. The term "bulk plant" is not intended to include dispensing stations as defined in NFPA 58-2004. A utilized bulk plant is a propane storage facility in which LP-Gas is placed in and later withdrawn for further distribution during the course of the current calendar year.
